

## SAFETY RELIEF VALVES

**Art.1917 – 1917M – 1917MAN – 1917SUN – 1918 – 1918MAN – 1927 – 1927M – 1927MAN – 1927SUN – 1928 – 1928MAN**

Safety relief valves for heating and hot water systems with operating pressure from 1,5 to 10 bar, manufactured in compliance with the key safety requirements

The safety relief valves are used in water and heating systems to control the pressure respectively in case of stored hot water or on boilers.

The use of the safety relief valve avoid damages to the circuit and relevant components by

discharge in atmosphere pressure value higher than the safety relief setted value.

### Technical Features

Maximum temperature :	120°C / 160°C (for "SUN" versions)
Minimum temperature :	- 5°C
Nominal pressure :	PN10
Medium :	water and glycol solution
PED category:	IV
Maximum percentage of glycol :	50%
Max opening pressure :	10%
Min closing differential :	20%
Threads :	female ISO 228 / ISO7 (for versions with bigger outlet size and "SUN") male ISO 228

Description	Material	Treatment
① Body	Brass CW617N-EN12165	-
② Lock nut	Nylon Pa6	-
③ Diaphragm	Brass CW617N (for "SUN" versions)	-
④ Stem	Etylene Propylene Rubber EPDM	-
⑤ Spring holder	Brass CW617-EN12164	-
⑥ Spring	Steel	Zinc plated
⑦ Regulation scREW	Steel EN 10270-1-SM	Zinc plated
⑧ Gasket	Aluminium alloy ZL0410-UNI EN 1774	-
⑨ Elastic ring	P.T.F.E. C755 carbon 25%	-
⑩ Handle	Steel C70	-
	ABS Polymer	-

### Working principle

The membrane (3), contrasted by a calibrated spring (6), is lifted when the calibration pressure is reached and completely opens the drain flow.

The calibration pressure is chosen according to the maximum allowable pressure in the system.

The diameter of the outlet is equal to or greater to facilitate the discharge of the required potential.

Upon pressure decrease, the opposite action occurs, with the subsequent closing of the valve within the set tolerances.

## Installation

The safety relief valves can be installed in horizontal or vertical position respecting the flow direction indicated on the valve body.

The valve correct size shall be defined by a specialized personel looking at the circuit desing and in respect of the current legislation.

The discharge pipework shall be also desinged in order to avoid any damages to persons or goods and in order to ensure the correct valve operation.

On hot water system the valve shall be installed near to the hot water storage and any shut-off device can be installed in between.

On heating systems the valve shall be installed in the upper side of the boiler or on the flow pipework at a maximun distance of one meter and any one shut-off device shall be installed in between.

For any further information please refer to your local dealer or directly to TIEMME S.p.A.
